

Dan Fitzpatrick
The AI Educator
Decisive Action in a World of AI Paralysis

Dan Fitzpatrick is one of the most influential voices shaping how education systems respond to Artificial Intelligence. Long before it became a mainstream concern, Dan recognised both the scale and urgency of Artificial Intelligence for schools and national education systems, and has helped leaders move from uncertainty to informed and ethical action.

Dan has advised national governments, parliamentary bodies, regulators, awarding organisations, and education charities, consistently placing public interest, learner safety, and long-term capability building ahead of short-term technological enthusiasm. His work has informed national guidance in the UK, Dubai and Kazakhstan.

Alongside this policy leadership, Dan works directly with education leaders and institutions across the world to embed sustainable Artificial Intelligence strategies spanning governance, curriculum, assessment, workforce development, and ethical decision-making. Through his popular bestselling books, weekly writing for Forbes, international keynote speaking, and the creation of initiatives such as the Edufuturists Awards and the Century Changemakers Student Awards, he has ensured that innovation reaches teachers, students, and communities, not just policy rooms. He is also a regular contributor on news outlets such as CNN, Sky News, BBC and ITV.

Dan's work continues to shape how education systems navigate one of the most significant technological shifts of our time with confidence, responsibility, and purpose.
